

Rotatruck™ vs Hand Truck

The Rotatruck™ is the easiest, quickest and safest way to handle large heavy items. It's ergonomic design minimises repetitive pull back and user effort, improves ergonomic safety and productivity and delivers immediate ROI.

Pull-backs

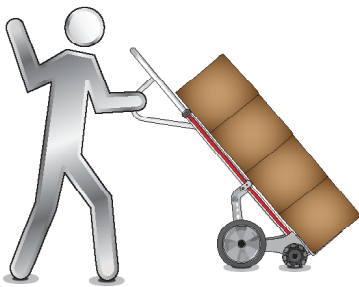

Easier pull-back effort and no need to park at waypoints.

59% less pull-back effort
32% less pull-back bending

Need to park and pull-back loads at waypoints increasing strain on musculoskeletal structure.

Load support

Reduced effort as the Rotatruck carries the load, not the operator.

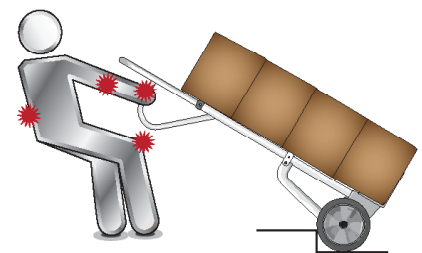

Requires constant operator input to maintain load balance exerting strain and effort.

Curbs & Obstructions

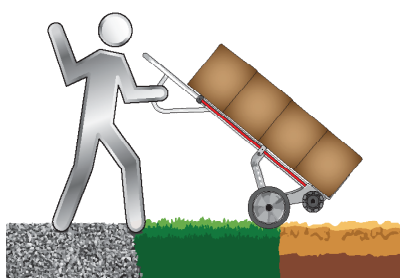

Lever rather than lift up curbs or over obstructions without reversing.

78% less effort negotiating curbs
48% faster negotiating curbs

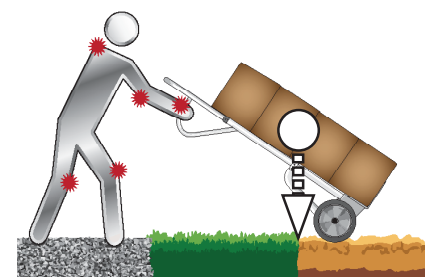

Operator exerts maximum effort to reverse and pull load up and over curb.

Soft Uneven Terrain

Balance rather than carry the load over soft or uneven terrain.

Operator carries increased share of load to safely move across terrain.
